Innovative Mounting Solutions Give Computers a Lift at HIMSS

The EVO™ Tablet Arm gives hospitals and physician practices a floating docking station for notebook and tablet PCs, while the 8326 Vertical Mounting Track mounts entire computing systems on a wall

New Orleans—February 15, 2007—Innovative Office Products, Inc. (www.lcdarms.com), a designer and manufacturer of ergonomic mounting solutions for LCD monitors and keyboards, will introduce the EVO™ Tablet Arm and 8326 Vertical Mounting Track at the Healthcare Information and Management Systems Society (HIMSS) 2007 Annual Conference & Exhibition, Feb. 25-March 1, at the Ernest N. Morial Convention Center in New Orleans.

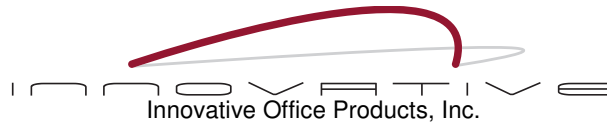

Innovative will be at **Booth 5652**.

The EVO™ Tablet Arm is a floating docking station for tablet PCs and notebooks. A gas spring arm "floats" the computer above work areas for comfortable viewing, with quick attach and release for work on the go. A full-size keyboard and mouse can be used to recapture the comfort of a desktop PC.

"This product meets the needs of hospitals, physician practices and other clinical settings, where notebook computers are increasingly used," said Bud Oddsen, president of Innovative Office Products. "Physicians and nurses can slide in their notebook upon entering a room, adjust to meet their viewing and computing needs, and then quickly release it when they are done. It offers mobility, convenience and ergonomic comfort."

Unique features of the EVO™ Tablet Arm include:

- User-friendly design that securely grips both tablet PCs and notebooks without the use of Velcro or sticky tape.
- Adjustable clasps that allow free access to jacks, CD drives and ports.
- Adjustable strength allows the user to "dial in" the weight of his or her portable for optimal balancing.
- Folds flat, freeing space when not in use.
- Adjustable strength allows the user to "dial in" the weight of his or her portable for optimal balancing.

Innovative Mounting Solutions at HIMSS/2

The 8326 Vertical Mounting Track provides an extremely space-efficient method of elevating an entire computing system. Customized to meet individual needs, the 8326 mounts on the wall and holds LCD monitors and keyboards on flexible arms, as well as entire CPU units. Cables are routed through track and hidden behind a cable channel. The standard length is 19 inches, but the product comes in 13- and 31-inch lengths, as well.

"The 8326 Vertical Mounting Track is ideal for busy clinical settings," Oddsen said. "Not only does it save space, but offers the ability to create a clean, neat work environment and prevent accidents and trip hazards."

Demonstration arms, photos and interviews available. Contact Gary Kimball at gkimball@kimballcomm.com or 610-559-7585.

About Innovative Office Products, Inc.

Innovative Office Products, Inc. is an Easton, Pa., manufacturer that designs and builds an industry-leading product line of mounting solutions for computer monitors and keyboards. Founded in 1986, the company produces innovative products and custom-designed solutions that serve the needs of such prominent customers as the New York Stock Exchange, IBM, Lockheed Martin and NASA. Among many design awards received by the company is the 2006 red dot design award, and a silver medal by Business Week magazine's Best Product Designs Of The Year for 2002.
